

EME 180 N electrical gluing machine

IMBALLAGGI

The label, which is to be glued, is inserted under the shaft positioned in front of the gluing cylinder. As it turns continuously, this cylinder draws and glues the label at the same time. The label is delivered to the operator ready for application. A special device for the micrometric regulation of the glue also ensures maximum label cleanliness and perfect gluing of the label. The machine is built in steel and brass, while the glue tray is in ABS non-corrosive. All the parts in contact with the glue slot together and are easily disassembled without tools making cleaning operations simpler and quicker.

Technical data:

Useful width: mm.180

Dimensions :240 x 230 x 180

Weight Kg. 6.000

Tension, power consumption & frequency: 220 v.50-60 Hz.– 60 W.(on request 110 v.)
