

EME 230 N electrical gluing machine

IMBALLAGGI

The label, which is to be glued, is inserted under the shaft positioned in front of the gluing cylinder. As it turns continuously, this cylinder draws and glues the label at the same time. The label is delivered to the operator ready for application. A special device for the micrometric regulation of the glue also ensures maximum label cleanliness and perfect gluing of the label. The machine is built in stainless steel, brass and aluminium. All the parts in contact with the glue slot together and are easily disassembled without tools making cleaning operations simpler and quicker. **It is available the wider version mm. 270, EME270N**

Technical data:

Useful width: mm.230

Dimensions : 270 x 300 x 190

Weight Kg. 9.000

Tension, power consumption & frequency: 220 v.50-60 Hz.– 70 W.(on request 110 v.)
